#Project Proposal

#Title: FreshScan

#Overview/Description: #FreshScan is an app for PC and or mobile, that offers premium reminders about expiring food to eliminate the probability of #wasting food just because you forgot that food is expiring. FreshScan does this by using a QR code system through stickers #that you can place on your food or packaging that allows for easy tracking.

#Features: #Food expiration tracking (Fresh, About to expire, Expired) #Allows you to delete expired or eaten foods #QR Code scanner / Camera #QR Code sheet generator #Notifications when its about to expire and when it's expired #Input for expiration date after placing sticker on food and scanning #Detailed overview of your expiration date history

#How to Run/Requirements #Requirements: #Webcam/Camera #Android 5.0 and above (If mobile) #Windows 10 and above (If Laptop or PC)

#How to Run: #Make sure you have the system requirements #Download the file (APK if Mobile) #Run the file / APK #Choose one of the four options in the main screen; Food Tracking/Overview, QRCODE Scanner, QRCODE Generator, Settings. #Generate a QR Code and print it on any kind of sticker paper and paste it on an product you want to track. #Scan the QR Code to input the expire date of the product. #Track the date using the Food Tracking/Overview option.

#Sample Interaction/Example Output: #QRCODE Scanner scans the QR code, #User inputs the expiry date of the product, #System logs it into a .json file #User edits the expiry date #System overwrites the data of that specific QRCODE sequence with the new one #Application tracks the date and gives reminders 3 days before expiry and 1 day before expiry #If user uses the product before the expiry date, Deactivate/Delete the data of that product to cancel all future reminders.
